

It's Time to See Your Future

**The First and Only
Treatment for Dry
Age-Related Macular
Degeneration (AMD)
to Improve Vision**

Treatment With Valeda Can Help You See More Clearly Now and In the Future

Dry AMD is a degenerative disease and may result in vision loss

Dry AMD affects people in different ways

Your symptoms may be mild, or you may have no symptoms for several years. If your dry AMD progresses, your ability to see clearly may change.

Dry AMD can cause retinal cells to deteriorate and may result in cellular death, leading to geographic atrophy and permanent vision loss.

Symptoms of dry AMD may include:

- Blurry or fuzzy vision
- Straight lines appear wavy or bent
- Reduced intensity/brightness of colors
- Trouble adapting to low light
- Loss of central vision, which is necessary for driving, reading, recognizing faces and performing close-up work

Early treatment can make a difference

Healthy retinal cells are important for good vision. While there is no cure for dry AMD, early treatment is important. Valeda is the first and only treatment for dry AMD. Valeda uses photobiomodulation (PBM), specific wavelengths of light, to stimulate energy production within the cells resulting in improved cellular health. Treatment with Valeda can improve your vision now and in the future.

Don't delay. Ask your eye doctor if Valeda is right for you.

Indications for Use

The Valeda Light Delivery System is intended to provide improved visual acuity in patients with best corrected visual acuity of 20/32 through 20/70 and who have dry age-related macular degeneration (AMD) characterized by:

- The presence of at least 3 medium drusen ($> 63 \mu\text{m}$ and $\leq 125 \mu\text{m}$ in diameter), or large drusen ($> 125 \mu\text{m}$ in diameter), or non-central geographic atrophy, AND
- The absence of neovascular maculopathy or center-involving geographic atrophy

After about two years, the Valeda Light Delivery System treatment provides improved mean visual acuity of approximately one line of visual acuity (ETDRS) compared to those not receiving the treatment
